At Greenheck, “Green” is a Big Part of Our Identity.

The ever-growing demand for technologies, products and services that support “sustainable” or “green” initiatives has changed the way projects are conceived and carried out, and how products are designed, built and delivered in many industries. The call for energy efficiency, sustainable, clean sourcing of raw materials and environmental responsibility require continuous innovation and leadership. In the ventilation industry, Greenheck is the acknowledged leader.

While “green” may seem a relatively new idea, it’s been a part of Greenheck for a long time indeed. For decades, Greenheck has focused on the environmental side of the building industry – developing reliable, energy-efficient products and systems to promote occupants’ health and comfort.

Greenheck was one of the first manufacturers of air movement and control equipment to join the U.S. Green Building Council. The company references USGBC and ASHRAE guidelines and standards to identify specific products mechanical engineers can use when designing ventilation systems for sustainable design projects and those adhering to LEED certification guidelines. Greenheck’s Strategic Energy Team has an important role in our corporate sustainability efforts. These individuals continue to aggressively pursue energy-efficiency enhancements to the company’s global infrastructure to significantly reduce energy consumption and lower operating costs in our plants and facilities. These savings enable us to offer customers new competitive advantages in the marketplace.

These principles are also reflected in our sense of social responsibility. Greenheck has a long tradition of giving back to the people and communities that provide us a home. By supporting education, the arts and the health of our neighbors, we help to improve and sustain quality of life.

Greenheck’s commitment to the idea of “going green” extends to the source: our production facilities in the U.S., Mexico and China. The company has taken significant steps to reduce energy usage at our plants. By the nature of what we produce, we have always been a clean manufacturer. Our paint/finish facilities also adhere to a strict zero-contaminant policy. And we favor vendors that share our commitment.

Protecting our environment is just part of the story. Greenheck has always placed the health and safety of our workers, and the quality of life in our communities at the top of our list of corporate priorities. You can be confident that your green project is supported by a company that truly believes in and practices the principles that drive your efforts.

green – It’s not just what we make. It’s where we work. How we work. Who we are.
