

# Greenheck's Temperature Control Damper Program

## Choose the path to Greenheck

### • Better Service

For over 50 years, the Greenheck name has been synonymous with innovation, product quality and customer service.

Greenheck's Quick Delivery and Quick Build programs put our dampers at your jobsite when you need them. We offer a next day, 3, 5, & 10 day ship on most damper products.

### • Better Pricing

Greenheck strives to be very price competitive. Under this Damper program, you are exclusively offered the best pricing in the market.

### • Better Support

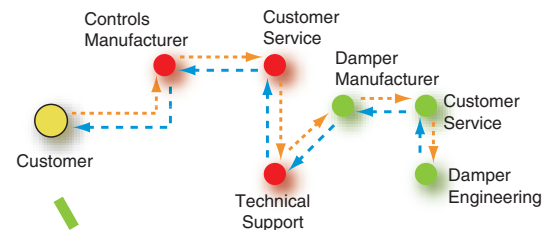

Greenheck's Representatives are local contacts who can respond quickly. They have a wealth of industry and product knowledge. Our representatives receive the latest product information and can have orders processed direct to our factory. With our advanced order processing system, we can ship orders as fast as the next day.

### • Better Quality

Greenheck has ongoing comprehensive product improvement to provide the best quality and reliability in the industry. Greenheck has state-of-the-art laboratory and testing facilities devoted exclusively to development and testing of damper related products to the latest versions of AMCA, ANSI, ASHRAE, UL, and other industry standards of performance.

## The Greenheck Advantage

**GREENHECK**  
The Solution Company.

#1 in Air Movement and Control

Fans and Ventilators ♦ Centrifugal and Vane Axials  
Energy Recovery Ventilators ♦ Make-Up Air Units  
Kitchen Ventilation ♦ Dampers ♦ Louvers

P.O. Box 410 Schofield, WI ♦ 715-359-6171 ♦ [www.greenheck.com](http://www.greenheck.com)

# Greenheck Installation Advantages

## Actuators:

Greenheck has a wide range of manual, electric and pneumatic actuators available. Actuators may be factory installed or provided for field installation. Some of the benefits with factory installed actuators are: 1) Greenheck tests and cycles every actuator 2) labor savings in the field and 3) confidence knowing the actuator is installed to enable the best performance of the damper.

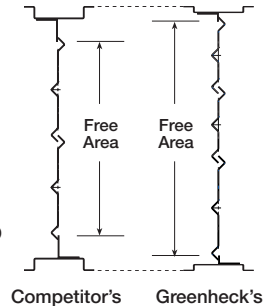

## Stainless steel jamb seals:

Stainless steel jamb seals are standard on all volume control dampers. Linkage on control dampers is concealed in the jamb.

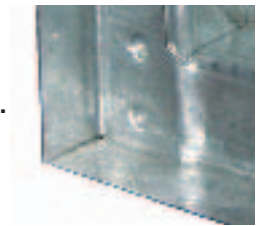

## Vmin Technology "Unique Advantage to Greenheck"

Greenheck's Vmin Technology design uses a combination of four symmetrical blade sizes to maximize the free area at any given height and minimize pressure drop. The Vmin design also allows for consistent operating characteristics regardless of airflow direction.

## Tog-L-Loc construction:

Greenheck's reinforced corner design is incorporated into every Greenheck control damper frame. This design provides higher structural rigidity than many competitors' welded frames. It also ensures that every frame has square corners, preventing blades from binding on the jamb seals and making damper operation much smoother due to less friction.

## Low profile top and bottom frames:

Standard on all dampers 17 in. high or less, low profile top and bottom frames optimize free area on smaller dampers and reduce pressure loss.

## No top or bottom:

Dampers are qualified for installation in any position with the blades horizontal. The damper can be rotated so the actuator is on the opposite side. In essence, the damper does not have a top or bottom.

## Ease of Installation:

Greenheck offers options to help with the ease of installing our dampers such as sleeves, transitions, flanges, and POC (literally means Piece of Cake) retaining angles.

## AMCA Certified:

The AMCA Certified Rating Program seal assures you that a product has been tested to the appropriate AMCA standards in accordance with a legal license agreement and that the manufacturer's catalogued certified ratings have been submitted to the AMCA staff for approval prior to publication. Greenheck offers the most damper products that are AMCA certified.
