

FM Global is one of the world's largest property insurance organizations. FM Global manages a non-profit research and testing organization which tests and provides approvals for building products to help minimize losses in building they insure.

The reason to specify and use products approved by FM is to guarantee operation. When you buy a product you expect it will work and function as the manufacturer describes and perform as intended. FM Approved products meet rigorous property loss prevention testing and certification standards. The benefits of specifying FM Approved products are reliability, repeatability, accessibility and integrity.

Greenheck life safety damper products qualify as FM Approvals Specification Tested Products. Specifying and building with the Greenheck products listed can give the building owner an edge on receiving and maintaining advantageous financing and insurance rates.
