 **GREENHECK**
Building Value in Air.

We have a system —
for building **Value in Air**
(The system you need.)

What buildings need.

Office building, warehouse, restaurant, school — all buildings have the same ventilation needs: comfort and fresh air for occupants, energy efficiency, safety, quiet operation, reliability and easy maintenance. Greenheck manufactures components for whole-building air systems that handle all of these essential needs. Greenheck makes it easy, providing simplified specification and product ordering processes; and products designed to offer quick, cost-saving installation, eliminating guesswork and wasted time.

Because ventilation requirements differ for a research lab, loading dock, gym, commercial kitchen or boardroom, Greenheck designs system solutions for specialized needs. Handling air in large open areas, removing noxious fumes, controlling grease, maintaining positive building pressure or ensuring whisper-quiet operation are all challenges met — and mastered — by Greenheck.

The value of a system.

Buildings benefit from utilizing integrated ventilation equipment from a single source. As an industry-leading manufacturer, Greenheck is focused on building value in air — by offering the widest range of reliable air movement and control products that are designed to work together as complete,

integrated ventilation systems. We will help you design the system that truly fits your building project, in performance and in cost.

Built-in value.

Greenheck addresses today's most complex industry challenges by introducing innovative, dependable, cost-effective solutions. Fabrication and assem-

bly at our own advanced facility ensures consistent product quality. Our own design and engineering team is the best in the industry. Our products undergo rigorous performance testing at our product development center. This extensive testing ensures that you can select more products with certifications from AMCA, UL, cUL, ETL and ARI than from any other manufacturer.

The value of convenience.

Greenheck is easy to work with. Our Computer Aided Product Selection program (CAPS) lets you quickly specify fans and ventilators, centrifugal and vane axial fans, energy recovery ventilators, make-up air units, indoor air handlers, coils, kitchen ventilation

systems, dampers, louvers, and laboratory exhaust systems.

The AMCA certified CAPS program offers users the ability to download configuration specific Revit® drawing files for BIM (Building Information Modeling) for many Greenheck products.

Greenheck is committed to exceeding expectations for quick response and on-time delivery anywhere in the world. Many of our most popular models are in stock at a warehouse near you, available for immediate shipping. With our Quick Build program, products that are not in stock can be built to customer specifications in 1-, 3-, 5- and 10-day cycles.

It's getting around the office — clean, quiet [a i r].

OFFICES

When do office workers notice their ventilation equipment? When they feel stuffy or uncomfortable. When fan noise disrupts their meeting. When they experience a “change of

climate” from one room to the next. At Greenheck, we ensure that your contributions to comfort and productivity in the workplace will go unnoticed! We do it

by manufacturing all the ventilation products you need to design a quiet, effective office air system that makes the work environment livable for workers, and cost-effective for building owners.

Outstanding performance in school [a i r].

SCHOOLS

School air control needs are complex and interrelated. When you equip for all applications — classrooms, labs, kitchen, cafeteria, pool, auditorium, gym — mixing and matching HVAC brands is not a value proposition. Greenheck

products are designed to work together in complete, integrated systems that deliver value — quick, cost-saving installation; energy efficiency; quiet operation; comfort for staff and students; and results that school boards

love. Our extensive testing ensures that you can select more products with certifications from AMCA, UL, cUL, ETL and CSA than from any other manufacturer. Engineering expertise and industry knowledge deliver value you can depend on, every school day.

Receiving, handling, distributing [a i r].

WAREHOUSES

The complex warehouse environment is just one of countless applications Greenheck has researched thoroughly. Warehouse

workers and visitors deserve the same safety and comfort they would enjoy in a well-ventilated, climate-controlled office building. To provide this

quality for your warehouse project, from loading dock to dispatch office, to vast storage area, pull from Greenheck's stock of ventilation know-how.

From dining room to kitchen, we handle the [a i r].

RESTAURANTS

There's an old saying about too many cooks in the kitchen — similarly, mixing and matching air control and ventilation equipment from different

manufacturers ("going a la carte") is not a good idea for restaurants. Greenheck offers the full-course solution you need to get the job done. For comfort and quiet in the dining area, clean air and safety in

the kitchen, a grease-free rooftop, and a menu of products that help control utility costs, cook with Greenheck. Our industry knowledge, engineering expertise and products are your key ingredients.

Let's talk about your whole building's [air] needs.
